

De la Encina attends the presentation of the new closure project for the port of Ceuta

- **The works will require an investment of €3.5 million and will be completed in March 2020**

07-11-2019 (Ministry of Development). The President of Puertos del Estado, Salvador de la Encina, accompanied by the Government Delegate in Ceuta, Salvadora Mateos, and the President of the Port Authority, Juan Manuel Doncel, attended the presentation to the media of the new project to close the port of Ceuta, included in the actions to strengthen the security of port facilities.

According to Salvador de la Encina, security will cease to be a problem in the port, which will allow it to continue to be the engine of growth of the city. In addition, he announced that "negotiations" are underway with the Ministry of Finance on the possibility of allocating five million euro of European funds to modernize the Maritime Station and other equipment linked to passenger transport.

The Port Authority of Ceuta has promoted a significant increase in investment of around €3.5 million to improve the perimeter protection of the port enclosure, which includes the best available technology; these include structural fences with high-sensitivity anti-intrusion soundproofing, access gates of the same characteristics, CCTV closed-circuit television systems, with Search Light technology, which will be installed with an advanced high-precision video system in 20 m high towers, which will allow the cameras and lighting to be repositioned in areas where an intrusion is detected, thanks to the integration of systems and the improvement of the current video surveillance management system.
